SOURCE

1. The head of the material supply section at an official conference at the State Secretariat, Chemical Industries, on 10 July 1953, announced that allotments of material had to be reduced because the material available was needed for the aluminum plant which was under construction in Bitterfeld. He said that the new plant had to be completed in 1953.
2. According to an instruction issued by the Minister Council in mid-July 1953, the target date for putting into operation aluminum electrolytical plant II at the Electrochemical Combine (EKB) in Bitterfeld was 31 December 1953.
3. In early July, the metal bar extrusion press of the EKB worked at about 40 percent of its capacity. It was therefore discussed whether the processing of cast aluminum at this plant could be expanded. No definite decisions were yet taken.
4. During the first six months of 1953, a total of 4,400 tons of aluminum was used for manufacturing semi-finished goods.

25X1A

☐ Comment. The target date for the putting into operation the new aluminum electrolytic plant can probably be met.
